- 

## Shop Orders

- View orders received for only that shop
- Order details

- Update order status:
    - Pending → Confirmed → Shipped → Delivered
- 
- 

## 3. Admin Panel (Basic)

*(Even minimal MVP needs small admin control)*

### Admin Features

- Admin login
  - Manage categories (Add/Edit/Delete)
  - View all shops
  - Approve/Reject shops (optional)
  - View all products
  - Delete inappropriate products
  - View all orders (for monitoring only)
- 
- 

## 4. Common Backend Functionalities

### Security

- JWT Authentication
- Role-based access (Customer / Shop / Admin)

---

## Database

- Users collection
- Shops collection
- Products collection
- Variants collection
- Stock collection
- Orders collection
- Reviews collection

---

## API Essentials

- Standard REST APIs
- Proper status codes
- Error handling
- Validation

---

---

## 5. MVP Must-Have for UI/UX

- Loading states for pages
- Empty states (no wishlist, no orders)
- Error messages (invalid login, no stock)

- Responsive UI for mobile & desktop
- Confirmation modals for delete actions
